

CS 240 In Class Exercise

October 3, 2011

Write a method `countWords` that takes in the name of a file, opens it, then uses a `Scanner` to read the file and return how many words were in it.

```
public static int countWords(String filename) throws Exception {
```

```
}
```

Write a similar method, `countLines` that counts the number of lines in a file.

```
public static int countLines(String filename) throws Exception {
```

```
}
```
