CS 240 In Class Exercise

October 3, 2011

Write the class `RunningSum`, whose `main` method keeps track of a running total. Display the sum, then continually prompt the user to input a number that gets added to it. For instance, if the user enters in 1, 2, then 3, the interaction might look like:

```
$ java RunningSum
Sum = 0
Enter a number to add to the sum: 1
Sum = 1
Enter a number to add to the sum: 2
Sum = 3
Enter a number to add to the sum: 3
Sum = 6
Enter a number to add to the sum:
```

```java
public class RunningSum {

}
```
